

If the action was **good**....

...and it became **more probable** the last time you took a gradient step, don't keep updating it too far or else the policy might get worse

...and it became **less probable**, you are free to undo that step (in the wrong direction) as much as you want

If the action was **bad**....

...and it became **less probable**, don't keep making it too much less probable or else the policy might get worse (i.e., don't step too far)

...and it became **more probable**, you are free to undo that step as much as you want (i.e., you can fix your mistakes)
